VIZION

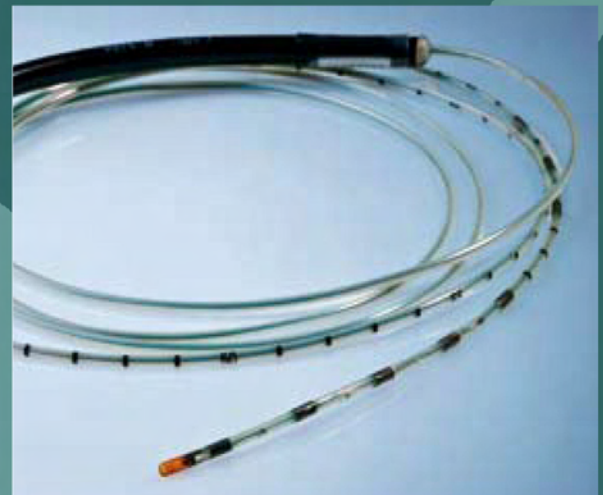

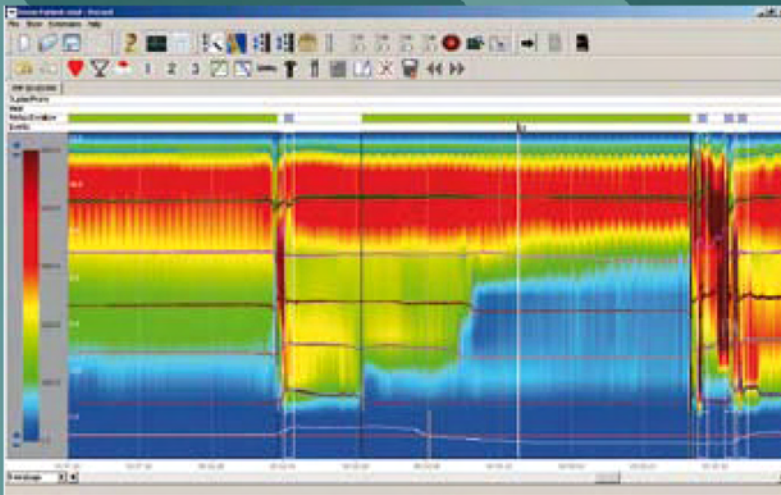

The Multi Channel Impedance-pH Recorder

- Small lightweight system
- Simple operation
- 7 Impedance channels
- 2 pH channels

CE 0297

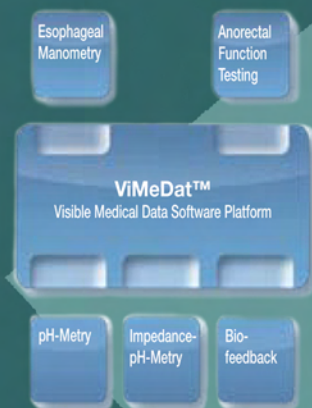

VIZION is a small and lightweight device which can do both classical pH-metry as well as combined Impedance-pH measurements. The system can be used with different catheters and can record for up to 48 hours. The data is recorded - using a fast data transmission - onto a Micro-SD card which then via a USB connection can be read. Configuration as well as the assignment of the symptom buttons is done via an integrated programming interface in the analysis software.

In combination with the ViMeDat™ (Visible Medical Data) software arises an integrated system for user friendly Reflux Diagnostics.

Both the topography as well as the classic presentation are available through an intuitive graphical user interface. The reports are fully configurable and Microsoft Word and OpenOffice compatible.

TECHNICAL DATA

- 7 channels impedance, 2 channels pH
- 3 user definable symptom buttons
- Plain text user interface in 13 languages for carrying out a measurement
- 512 MByte Data Memory on the Micro SD-Card

DATA RESOLUTION

pH	0.1 pH
Impedance	100 Ω
Measurement range	pH 0 - pH 10
Impedance	0 - 10000 Ω

SOFTWARE REQUIREMENTS

- Computer - USB connection, 2 GB RAM
1 GB free HD space, Mouse
- Display - Minimum 800 X 600
- Operating System - Windows XP, Windows Vista, Windows 7
Mac OS X 10.5 or higher
Linux Ubuntu 8.04 LTS or higher
